Calgary Scientific Inc. Continues to Strengthen Medical Imaging Team

Industry Software Veteran Ed Chan to Lead Product Strategy

Calgary AB, May 13, 2008 - Calgary Scientific Medical Group a leading provider of user-friendly advanced visualization and analysis software for OEM integration today announced that Ed Chan has joined the organization as Director of Product Management.

In his new role, Chan will provide expertise, leadership and direction for Calgary Scientific's product strategy and roadmap. Chan brings many years of product management and partner development experience in the medical imaging software market, having come to Calgary Scientific from McKesson's Medical Imaging Group. Prior to that, Chan was with A.L.I. Technologies Inc., a PACS vendor acquired by McKesson in 2002.

"We are extremely pleased that Ed Chan has joined our organization. He brings significant expertise in medical imaging and advanced visualization, particularly in the PACS marketplace, which is the number one market for integrating our solutions," said Dr. Byron Osing, CEO of Calgary Scientific. "With eight OEM relationships in place and several others in negotiation, Ed's medical imaging experience and leadership will be a key contributor to this next phase of our company growth. Following the addition of Dr. Colin Holmes to the team late last year, Ed provides us even greater industry depth and demonstrates further our commitment to becoming a world-class provider of advanced visualization solutions".

"I am pleased to be joining this rapidly emerging advanced visualization leader," remarked Chan, "There are so many promising developments here at Calgary Scientific. I am tremendously excited to be working with such a talented team to drive product strategy and contribute to the company's next level of success."

About Calgary Scientific Medical Group

Calgary Scientific Medical Group focuses on commercializing advanced visualization technologies in the healthcare field. Our patented innovations in 3D and 4D visualization software will enhance the use of CT, MR, PET and ultrasound imaging, resulting in improved diagnosis, treatment and monitoring of serious illnesses such as cancer, heart disease, stroke and other life-threatening diseases.
