Calgary Scientific Partners with Optimed Software

Partnership created to make Electronic Health Records widely accessible

Calgary, AB – May 11, 2009 - Calgary Scientific Inc., a leading innovator in advanced visualization solutions, has partnered with Optimed Software Corporation to offer a seamless, comprehensive solution for the Electronic Health Record (EHR) distribution and viewing of laboratory and diagnostic imaging (DI) results. Through this unique solution, physicians can instantly access DI images and reports through their iPhone, laptop or desktop. This accessibility could cut wait times for imaging results by up to two weeks.

Canada Health Infoway has invested \$1billion to improve the infrastructure for radiology diagnostic procedures, encouraging the conversion to digital technology so that diagnostic images can be stored and accessed electronically, with the goal of enhancing patient care and reducing system costs. That technology is largely in place in terms of image creation and storage. Now, extensive technical and financial resources are being allocated to EHR initiatives across North America. An important goal of these initiatives is to get the images to the referring physician as fast as possible.

Calgary Scientific specializes in advanced visualization software, marketed under the ResolutionMD™ brand of products, with a focus on the web-enablement of Medical IT. Calgary Scientific's products are accessible to a broad range of network and web-based users through the PureWeb™ platform, which allows diagnostic images to be viewed on any browser-compatible computer hardware or mobile device. PureWeb enables significant traditional technical barriers to be overcome via a multi-patent pending, advanced web enablement platform. PureWeb has the exceptional capability to truly web enable even the most sophisticated third-party software products, and Calgary Scientific will aggressively pursue opportunities in the rapidly growing global EHR space with this leading-edge product.

Optimed has developed software that integrates with Calgary Scientific's visualization platform. This provides physicians who order lab and DI tests a secure web-based inbox for the physician to receive and sign-off regional lab results and DI reports, with immediate access from the DI reports to advanced digital medical images stored in geographically dispersed PACs systems. Physicians will be able to view DI images from their offices, operating rooms, or wherever they provide patient care. Optimed's software is marketed as Accuro® EHR.

An agreement has been signed to license the PureWeb and ResolutionMD software to Optimed for integration into the Accuro® product line. It also allows for Optimed and Calgary Scientific to jointly market the integrated software through 'software as a service' (SaaS) distribution model. Optimed currently enjoys significant market penetration in the Canadian healthcare market with its Accuro product offerings, and is focused on growing market share significantly.

In announcing the signing Mr. Hildebrandt, President of Optimed Software said, "The integration of ResolutionMD™ and Accuro EHR has created a solution that can provide seamless delivery of diagnostic images over the Web. It has the potential to revolutionize the distribution of patient diagnostic results records from labs and radiologists to referring physicians and to make a significant step forward in realizing the goal of a portable Electronic Health Record for all Canadians."

Pierre Lemire, President of Calgary Scientific said, "A truly comprehensive EHR solution requires that the digital patient images be immediately accessible and usable by referring physicians through a standard high-speed internet connection and web browser, in tandem with the patient's traditional medical record

and lab reports. For the first time this is possible across a large, distributed population of physicians with the recent market release of the PureWeb™ platform technology, in combination with the ResolutionMD™ diagnostic imaging product line. Now integrated with Optimed's Accuro EHR software, this end-to-end solution provides a technical product breakthrough that completes the link between all the necessary information and imaging elements required by the specialist and referring physician populations to deliver very significant improvements in patient care, more rapidly, and at lower costs to the Healthcare system. We look forward to developing this significant new market opportunity together with Optimed.”

About Calgary Scientific Inc.

Calgary Scientific is dedicated to providing advanced visualization solutions for medical imaging that improves the efficiency and quality of diagnosis made by imaging professionals. Calgary Scientific has a powerful portfolio of products that perform sophisticated image post-processing, including tools for 2D, MIP/MPR and 3D, a suite of cardiac modules for both CT and MR, and vessel analysis. Calgary Scientific also has proprietary intellectual property for image fusion, virtual colonoscopy and Computer Assisted Tissue Identification (CATI™). Calgary Scientific aims to be the premier provider of advanced visualization solutions in the medical imaging market.
