Calgary Scientific hires Business Development Manager for non-healthcare industry

Success of PureWeb™ platform prompts efforts to include non-healthcare fields

Calgary, AB – April 22, 2009 - Calgary Scientific Inc., a leading innovator in advanced visualization solutions, has hired Mark Wagner to lead business development efforts for the company in the non-healthcare field. Since introducing the PureWeb platform in December of 2008, the company has experienced increasing demand for the product, which enables third-party products to be delivered over the web as well as the company's own ResolutionMD product suite.

“Calgary Scientific’s PureWeb platform is revolutionizing how users access software applications in one of the most demanding environments – diagnostic medical imaging,” says Wagner. “The capabilities enabled by PureWeb: simplified web browser access and server virtualization, updated and consistent user interfaces for legacy applications and high performance rendering of interface information, will also have a significant benefit in other market segments. The Business Development role with Calgary Scientific provides an exciting opportunity for me to work with stakeholders in the entertainment, scientific, government and business sectors to enable high performance and efficient access to their critical applications from fixed and mobile devices anywhere and at anytime.”

Wagner has BSc in Electrical Engineering and an MBA - both from the University of Alberta. Prior to joining Calgary Scientific, Mark held a wide range of product management roles at Nortel.

“Bringing Mark on to lead business development efforts demonstrates the breadth of applications for the PureWeb platform,” says Randy Rountree, Executive Vice President of Global Sales and Marketing. “His engineering and product management experience give him the unique skill-set to have a deep understanding of how our products work and be able to identify opportunities for different industries to effectively utilize our products.”

About Calgary Scientific Inc.

Calgary Scientific is dedicated to providing advanced visualization solutions for medical imaging that improves the efficiency and quality of diagnosis made by imaging professionals. Calgary Scientific has a powerful portfolio of products that perform sophisticated image post-processing, including tools for 2D, MIP/MPR and 3D, a suite of cardiac modules for both CT and MR, and vessel analysis. Calgary Scientific also has proprietary intellectual property for image fusion, virtual colonoscopy and Computer Assisted Tissue Identification (CATI™). Calgary Scientific aims to be the premier provider of advanced visualization solutions in the medical imaging market. For more information on Calgary Scientific, go to www.calgaryscientific.com.
